SARA ALAOUI SOSSI

CYBERDEFENSE ENGINEERING STUDENT | SOC · BLUE TEAM

saraalaouisossi1@gmail.com | +212 625-042724 | Sara Alaoui Sossi

PROFILE

5th-year cyberdefense engineering student at ENSA Marrakech, focused on defensive security: intrusion detection, malware analysis and incident response. Seeking an end-of-studies internship (PFE) in a SOC / Blue Team.

EDUCATION

Engineering Degree – Cyberdefense and Embedded Telecommunications Systems – ENSA Marrakech 2022 – 2027

Baccalaureate, Mathematical Sciences A – Lycée Mohamed V, Marrakech, Morocco 2022

EXPERIENCE

Orange Cyberdefense 01/07/2026 – 31/08/2026
Intern – SOC Team Casablanca, Morocco

- Static and dynamic analysis of a Word macro dropper: payload decoding, IOC extraction and writing of **YARA** rules
- Detonation under **SentinelOne** (production EDR) and alert triage: 9 alerts raised in under 2 minutes, attack chain reconstructed in Storyline despite WMI parent-process spoofing
- Detection coverage assessment: 17 **MITRE ATT&CK** techniques mapped against the EDR's indicators, blind spots identified and 4 response measures proposed

21Knowledge 01/07/2025 – 31/07/2025
Cybersecurity Intern Marrakech, Morocco

- Automation of IOC enrichment (URLs, IPs, files, emails) through **n8n** workflows orchestrating Threat Intelligence sources (VirusTotal, AbuseIPDB, Firecrawl)
- Design of the **Securoxy** platform with a results-visualization interface, deployed on Vercel

PROJECTS

SOC Lab: detection, purple team and incident response – Elastic Security, Sigma, Velociraptor, n8n

- SOC lab on VMware (Active Directory, pfSense, **Elastic Security**, Elastic Defend EDR via Fleet) with Windows telemetry validated before any rule
- 15 detection rules as detection-as-code (**Sigma**, KQL/EQL), documented and checked by GitHub Actions
- Emulation of a 5-step AD attack and Atomic Red Team: 20 **MITRE ATT&CK** techniques detected, mapped in Navigator
- Incident response: host isolation, forensics with **Velociraptor**, alert enrichment with n8n

SOC-oriented DevSecOps – Zeek, Splunk, Jenkins, GitLab, Docker

- Deployment of **Zeek** IDS/IPS: 10 behavioral detection scripts (HTTP/SSH brute force, DNS tunneling, exfiltration, suspicious TLS certificates) with automatic UFW blocking
- Deployment of **Splunk** with Universal Forwarder to collect logs from the secured CI/CD pipeline (Jenkins, Gitleaks, GitLab) and detect attack scenarios
- 3 validated attack scenarios (secret leakage, pipeline poisoning, reverse shell) with an **MTTD < 2 min**

IDS & intrusion response – Suricata, ELK Stack, iptables, Linux

- Deployment of **Suricata + ELK** on a honeypot: intrusion detection and centralized alert analysis to identify the most common attack techniques
- Response to detected intrusions through **iptables** rules

AAA infrastructure – Cisco, FortiGate, Active Directory, RADIUS

- Integration of Cisco, FortiGate and Active Directory into centralized AAA (RADIUS) with per-user access policies

Virtualization infrastructure – VMware vCenter, ESXi, vMotion, DRS, HA, Ubuntu

- Deployment of vCenter and ESXi hosts: vMotion, Storage vMotion, DRS and HA, DNS/DHCP on Ubuntu Server

SKILLS

SIEM, EDR & log analysis : Elastic Security, Splunk, ELK Stack, Logstash, Filebeat, Zeek, Suricata, Falco, SentinelOne, Grafana
Detection engineering : Sigma, KQL/EQL, YARA, MITRE ATT&CK, ATT&CK Navigator, Cyber Kill Chain, Atomic Red Team
Malware analysis & forensics : oletools, CyberChef, Sysmon, Procmon, FakeNet-NG, Regshot, Ghidra, x64dbg, Volatility, Autopsy
Threat hunting, CTI & SOAR : Velociraptor, DFIR-IRIS, MISP, OpenCTI, VirusTotal, AbuseIPDB, urlscan.io, Firecrawl, n8n
Network & security : FortiGate, Cisco, pfSense, RADIUS, iptables, UFW, GNS3, Wireshark, tcpdump
Pentest : Nmap, Burp Suite, Metasploit
Systems & virtualization : Active Directory (Kerberos, LDAP, GPO), Linux, Ubuntu Server, VMware Workstation, vCenter, ESXi
Languages & CI/CD : Python, PowerShell, Java, SQL, PL/SQL, Docker, Jenkins, GitLab, Git/GitHub, Gitleaks, Vercel
